

As solar technology continues to evolve and costs decline, Africa's journey toward a brighter, solar-powered future is poised to accelerate, illuminating millions of lives across the continent.

Made up of 54 countries, Africa gets more sunshine hours than any other continent. It has some of the highest levels of solar irradiance -- the power of the sun per square meter -- in the...

Africa's solar energy market continues to grow significantly. In 2025, the continent added more than 5,000 MW solar power capacity. In this article, we breakdown countries leading this drive.

In 2025, 18 African countries are expected to install at least 100 MW of new solar capacity - up from just two in 2024. This means more solar will be installed in more countries, boosting the regions overall ...

Africa's energy transition is showing a dual trend. Large utility-scale solar projects still make up more than half of total installed capacity, supplying power to national grids. However, distributed solar ...

OverviewSolar thermal powerSolar potentialPay-as-you-go SolarSolar photovoltaicsSee alsoThe Kingdom of Morocco's solar plan, which is one of the world's largest solar energy projects and estimated to cost about \$9 billion, was introduced in November 2009 with the aim of establishing 2,000 MW of solar power by 2020. Five sites have been selected for the development of solar power plants combining a number of technologies including concentrated solar power, parabolic trough as well as photovoltaics

South Africa has developed several solar thermal plants, both parabolic trough and power tower types. In 2017, it was the leading country in Africa for both solar thermal and PV solar energy.

Africa recorded its highest-ever solar capacity additions in 2025, with a 54% year-on-year increase, led by South Africa and Nigeria. South Africa added 1.6 GW, Nigeria 803 MW and Egypt ...

As in previous years, Africa's PV market activity in 2024 was heavily dominated by two countries, South Africa and Egypt, which saw 1.2GW and 707MW of new additions, respectively.

At a climate summit in January this year, African leaders committed to bringing renewable energy capacity in Africa to 300 gigawatts by 2030. That amount of power equals the output of about ...

In the sections that follow, we explore the top ten African solar markets in 2025, spotlighting countries that combine scale, growth momentum, supportive policy environments and ...
