

Vienna's unique position in Europe's energy transition makes it the smart choice for wholesale battery procurement. Whether you're balancing microgrids or powering e-mobility fleets, partnering with local ...

The successful endeavor is part of the company's strategy to increase battery use in the DACH region - Germany, Austria and Switzerland, and beyond. One of the key benefits of the new ...

Our battery management system is developed in Germany. Final assembly is also carried out in Germany -- ensuring the highest quality, reliability, and short delivery times.

This paper presents an advanced control strategy for a grid-connected Battery Energy Storage System (BESS) using a bidirectional Vienna rectifier. The proposed system effectively ...

Battery-Management-Systems is ever more increasing. In parallel, driven by the set global climate goals, the transformation of the mobility sector away from combustion engines to battery electric ...

Austria, like other countries deploying significantly more renewable energy, is working to scale up its use of battery energy storage systems (BESS), which are proving essential for the...

As the global market for battery management systems continues to expand, driven by increasing demand for electric vehicles and renewable energy integration, Austria presents a dynamic ...

The considered system is illustrated in Fig. 1, consisting of a stand-alone wind energy conversion system, composed of a PMSG wind generator with a Vienna rectifier, related to a lithium ...

The project contributes to achieving the optimal use of battery systems, extending their service life and reducing costs through more efficient use of materials.
