What is a high-voltage energy storage system?

A high-voltage energy storage system (ESS) offers a short-term alternative to grid power, enabling consumers to avoid expensive peak power charges or supplement inadequate grid power during high-demand periods. These systems address the increasing gap between energy availability and demand due to the expansion of wind and solar energy generation.

What is a high-performance battery management system (BMS)?

These systems address the increasing gap between energy availability and demand due to the expansion of wind and solar energy generation. MPS's high-performance battery management systems (BMS) carefully manage all of the battery cells within a high-voltage ESS to provide safe and reliable operation with high capacity across a long operating life.

What is a high-voltage ESS?

Most high-voltage ESS consist of multiple battery modules (BMUs) to manage and scale a system for site-specific requirements. Within a BMU, MPS's battery monitoring and protection devices can be used as a comprehensive analog front-end (AFE) to accurately measure up to 16 series Li-ion battery cells.

What is a battery management system (BMS)?

This BMS solution includes two boards: a power board and a control board, which are designed to sustain high currents and ensure the battery behaves within the defined SOA by utilizing the MP2797 battery monitor and protector, and the MPF42793 fuel gauge IC.
