

Recent tariff policies in the US are set to increase the cost of power generation technologies, with energy storage seeing the biggest hike due to its dependence on Chinese imports, ...

US imports of various types of batteries and related parts for energy storage systems, electric vehicles, consumer electronics and other uses have soared this decade, especially lithium ...

New analysis from Clean Energy Associates (CEA) and Wood Mackenzie highlights the challenges facing the US battery storage market due to trade tariffs.

Recent tariff policies are set to increase the cost of power generation technologies, with energy storage seeing the biggest hike due to its dependence on Chinese imports, according to the ...

Tariffs and funding overhauls by the Trump administration are set to raise energy storage prices and hit short term deployment as domestic manufacturing capacity falls short. March 10 - The...

Import tariffs could raise battery costs for U.S. utility-scale energy storage installations by more than 50% and make the United States the world's most expensive solar market, Wood ...

A report by consultant Wood Mackenzie examines two possible tariff scenarios and concludes costs will skyrocket for battery energy storage systems (BESS) and utility-scale solar.

Proposed tariff increases on Chinese lithium-iron-phosphate (LFP) battery imports threaten to disrupt the United States' deployment of battery energy storage systems (BESS), a ...

Two major areas of international trade that will remain causes of concern for energy storage projects are the application of tariffs and supply chain integrity.

The U.S. Energy Trade Dashboard provides annual, HS -10 level trade data on U.S. exports (Schedule B) and imports (HTS) of primary energy, energy equipment, and materials for battery supply chains.

Energy storage power imports
