

Georgia solar energy for the environment

Solar development is rapidly expanding in Georgia, bringing a beneficial source of green jobs and revenue for the state as well as providing clean renewable energy to Georgia. Unlike power ...

Georgia's solar and storage market has taken off in recent years, landing it a top spot in SEIA's national solar rankings. During the 2024 session, an industry-supported decommissioning bill was passed ...

The document provides photovoltaic (PV) solar facility developers with recommended practices to consider. Ranging from site selection to construction to operation/maintenance, our ...

Five utility-scale solar farms totaling 1,068 MW will be built across Georgia, boosting clean energy for the state.

More than 3,000 MW of solar resources, or approximately 12% of our total capacity*, generate significant carbon-free energy for Georgians during sunny, daylight hours.

Atlanta and Athens (as well as Savannah, Clarkston, and Augusta who have not finalized their plans yet) have committed to obtaining 100% of their energy from clean and renewable sources, such as solar ...

The Drawdown Georgia research team estimates that Georgia could reduce emissions by one megaton (Mt) of CO₂e by adding ten new 100-MW utility-scale solar installations and 36 new 5-MW ...

Through proactive planning and partnership, PV solar development can help meet Georgia's renewable energy needs, minimize impacts to natural resources, and maximize opportunities to increase co ...

Appropriate site selection, construction, and maintenance of solar facilities are critical to sustainably grow solar resources while also protecting and enhancing natural resources and biodiversity.

For the thousands of Georgians who rent their homes or have roofs unsuitable for solar, this legislation could unlock access to clean, renewable energy.
