

Germany's new outdoor power supply market

Does Germany need an electricity market?

In other words: the electricity market must continuously guarantee an uninterrupted supply of electricity to both German industry and society. Germany has the highest installed power plant capacity in the EU and both produces and consumes the most electricity.

What is Germany's current power plant capacity?

Current power plant capacity The installed generation capacity in Germany's general supply networks as at 28 October 2024 amounted to 267.9 GW(net), including 12.9 GW of capacity outside the electricity market.

How reliable is Germany's electricity supply?

In an international comparison, Germany's electricity supply is very reliable. The System Average Interruption Duration Index (SAIDI) is used as a yardstick to measure the reliability of the electricity supply for end users. This index shows the average interruption duration caused by the grid for each final consumer during a given year.

How much electricity does Germany produce in 2023?

The network balance provides an overview of supply and demand in the German electricity grid in 2023. Supply comprised a total net electricity generation of 482.4 terawatt hours(TWh), including 10.1 TWh from pumped and battery storage and physical flows from other countries into Germany's general supply networks amounting to 69.2 TWh.

Meta Description: Explore the booming outdoor power supply overseas market scale, key growth drivers, regional trends, and how industries like camping, construction, and emergency services ...
