

High-efficiency off-grid solar containerized cement plant

Holcim US is installing a 25-MW solar array at its cement plant in Alpena, Mich., which will help the facility self-generate 75% of its electric power needs with green energy.

Cemex and Synhelion announced today a significant milestone in their joint effort to develop fully solar-driven cement production: the scaling of their technology to industrially-viable levels.

Addressing renewable energy intermittency, and the need for grid upgrades and strategic infrastructure investments are critical to enabling the transition to low-carbon cement manufacturing.

Solar power generation installed on cement facilities isn't just environmentally responsible - it's becoming the ultimate competitive advantage in a decarbonizing world.

This study makes a novel contribution by addressing the unique technical and economic challenges of coupling solar-powered electrolysis with the continuous, high-temperature energy ...

An innovative and efficient solar power plant solution has been developed for cement factories. On an annual basis, solar PV systems in cement plants may save 22,941 tonnes of CO₂.

In January 2024, GCC completed its first solar field project at its Trident Plant near Three Forks, Montana. The solar field can generate approximately 11% of the plant's total energy needs, avoiding ...

This central solar utility provides high-temperature process heat not just to a cement plant, but to a synergistic cluster of co-located industries. Imagine a sprawling complex in North ...
