

Fit for demanding applications teel working to powering advanced electric propulsion systems in large ships. It is not only the sizing and power level of he UXP2000, also the robustness and performance ...

diverse ranges of high voltage resistors. Across the HV range from 1 to 100kV products are available which provide safety in discharge, reliability in balancing and accuracy in measurement. For ...

Riedon"s expansive line of wire wound resistors work exceptionally well for use in the high energy locations in the diagram such as braking and surge current protection.

Discover our high-performance silicon metal resistors, designed for use in high power inverters, converter pre-charge circuits, and inrush limiting. With a high continuous temperature rating, our non ...

The DC-Link capacitor is a part of every traction inverter and is positioned in parallel with the high-voltage battery and the power stage (see Figure 1). The DC-Link capacitor has several functions, ...

The high voltage soft start resistor is a vital component for managing inrush current during inverter and power supply startup. By gradually charging capacitors, it helps reduce electrical stress and protects ...

Designed for EV, aerospace, and energy test systems, the compact boards combine safety interlocks, calibration support, and four-channel density to validate inverters, BMS, and other ...

Engineered to absorb and dissipate large amounts of energy, high-power inverter resistors are built for demanding applications involving high current and voltage levels.

HVR International continues to expand its markets wherever there is a demand for resistors with high voltage and high energy per unit volume. In this respect, the ceramic carbon resistor is probably ...

Resistance value: Select the appropriate resistance value according to the circuit design and working conditions of the high voltage inverter to ensure that the resistance can provide the ...

Inverter anti-electric high voltage resistor
