

Is there no solar power generation in the northwest

To meet climate targets, the Northwest needs to build unprecedented amounts of wind and solar power and the electric transmission lines to carry it. Easier said than done.

Solar power has both seasonal variation and intra-day variation, with no solar power being generated at night. If Oregon policymakers succeed in stopping the use of fossil fuels to ...

This visualization shows wind and solar energy generation in the four Northwest states from 2000-2022. In the Northwest, wind energy generation has increased significantly more than solar energy ...

The Pacific Northwest's corner of the grid urgently needs more wind, solar and other sources of power generation, as well as new transmission lines to feed a rapidly rising appetite for...

The Northwest states passed aggressive goals to decarbonize the power supply but left it to the Bonneville Power Administration to build the transmission lines needed for wind and solar.

The Council develops a plan, updated every five years, to assure the Pacific Northwest of an adequate, efficient, economical, and reliable power supply.

Despite lingering doubts, Pacific Northwest solar myths do not reflect the reality of modern photovoltaic technology and region-specific data. Cloudy skies, mild snowfall, and the ...

Having failed to add enough green-energy sources or any new gas-fired power, the Northwest buys electricity from elsewhere, at high prices, during extreme weather.

What's held the Northwest back is a bottleneck that lawmakers paid little attention to when they set out to go 100% green, the investigation found: The region lacks the wiring infrastructure...

Coupled with the glacial pace at which new renewable energy is added to the electrical grid, the study finds the greater Northwest is not prepared for the rising power demand.
