

Israel Sodium Ion Energy Storage Project

Projects already underway include the development of cost-effective sodium-ion batteries and the recycling of lithium-ion batteries, which are central to renewable energy storage.

The primary goal of these new storage facilities is to capture renewable energy generated in southern Israel in daytime and deliver it to consumption centers in central Israel in the ...

The institute--Israel's first of its kind--is set to play a central role in developing energy storage technologies, supporting groundbreaking academic research, and serving as a launchpad for ...

Israel's Ministry of Energy will establish a national research institute in the field of energy storage with Bar-Ilan University and the Technion - Israel Institute of Technology.

Professor Emanuel Peled from Tel Aviv University, in collaboration with Bar-Ilan University, will develop sodium-ion batteries with the potential to power affordable, grid-scale energy ...

The cooperative project will focus on advancing the science and development of solid state batteries, including work on advanced coatings, cell components, cells, and materials informatics software, for ...

Officials hailed it as a milestone toward climate-tech leadership, with selected projects already underway, including sodium-ion battery development and lithium-ion recycling.

Israel Sodium Ion Energy Storage Project Solid Energy Consortium (UISEC) will develop lithium and sodium metal solid-state batteries for advanced energy storage applications.

Sodium-based batteries for storing renewable energy cheaply and the recycling of lithium-ion batteries are among the challenges to be researched at a new NIS 130 million (\$37 million) ...
