

In the design procedure of a PV-based microgrid, optimal sizing of its components plays a significant role, as it ensures optimum utilization of the available solar energy and associated ...

In this study, the techno-economic feasibility of an energy storage system for an autonomous microgrid based on solar and wind energy in the southern region of Morocco is evaluated.

The goal of the project is to analyze the challenges that microgrids, based on mainly renewable energy combined with battery systems, are facing in rural Morocco and to stimulate their ...

(PSO) as the sole algorithm. The microgrid model proposed integrates. agricultural firm. Real. r analysis. The primary objective is to minimize excess production. from PV and wind sources when the battery ...

Microgrids are a technology that provides an alternative to standard grid-based electricity, which is primarily reliant on fossil fuels. Solar micro grids with

This standalone microgrid is designed to meet the energy needs of an agricultural firm in Agdz, Morocco. It provides a reliable energy supply using the area's available solar and wind resources.

However, rural Moroccan communities remain disadvantaged and dependent on fossil fuels. This study aims to address this gap by combining geospatial data analysis with machine ...

This paper focuses on optimizing renewable energy sources within a standalone microgrid using particle swarm optimization (PSO) as the sole algorithm. The microgrid model proposed ...

This research proposed a techno-economic optimization framework for the optimal design and operation of interconnected AC microgrids to improve energy access in rural areas.

Microgrid operation morocco
