

What are solar panel frames?

Solar panel frames are systems specifically designed to hold photovoltaic modules in place and provide the optimal tilt to capture the maximum amount of solar energy.

What is a V type solar system?

“V” type structures are designed specifically for flat surfaces, such as land or terraces. These structures allow easy and efficient installation of photovoltaic modules on the ground, providing an optimal inclination to maximize solar energy collection.

Why should you install solar panels on a tiled roof?

The inclination of the panels follows the slope of the roof, maximizing solar exposure and energy efficiency. For those who have tiled roofs. They allow the solar panels to be fixed directly on the tiles without the need to drill them, which guarantees a safe installation without damage to the roof.

Why do solar panels need to be raised above the ground?

These structures raise the solar panels to a certain height above the ground, which allows better ventilation and prevents the accumulation of dirt under the panels. They are ideal for installations on uneven terrain or for those who want to take advantage of the space available under the panels for other purposes, such as parking or storage.
