

Romania added 2.2 GW of solar in 2025, according to figures from the Romanian Photovoltaic Industry Association (RPIA). The result marks a third consecutive year of growth in ...

The Romanian rooftop solar structures market is experiencing a period of profound transformation and accelerated growth, driven by a powerful convergence of national energy security ...

Romania is on track for record solar deployment in 2025, driven by subsidies for residential and commercial and industrial systems and a more favorable framework for utility-scale ...

Rising electricity tariffs have further accelerated interest in renewable solutions, particularly in the residential sector, where solar panels are becoming a smart long-term investment.

With an average of 1,900 to 2,400 annual sunlight hours, Romania has significant natural potential for solar PV development. Yet, the country has not set ambitious targets for renewable energy sources, ...

This article will delve into Romania's solar landscape, providing a comprehensive overview of the current state of the market, government policies, and incentives, as well as the potential for future growth.

This diverse portfolio of projects showcases the scalability, adaptability, and potential of solar energy in meeting Romania's energy needs. The cumulative installed capacity represents a ...

Romania's revised NECP draft outlines modest growth targets for solar power capacity but this below the country's solar potential and lacks specificity and concrete measures for achievement.

Romania is undergoing a significant expansion in solar power within its broader energy transition framework, bolstered by European funding and legal reforms.

Romania's expanding solar and energy storage capacities reflect a decisive shift towards renewable energy. With robust growth in both large-scale and residential installations, the country is ...
