

InfoLink Consulting provides weekly updates on PV spot prices, covering module price, cell price, wafer price, and polysilicon price. Learn about photovoltaic panel price trends and solar panel ...

China's domestic solar module installations plunged to a record low in August as rising prices and policy shifts have prompted developers to reassess project viability amid weakening ...

For the past year and a half, Chinese manufacturers have been selling solar modules and storage systems at rock-bottom prices, trying to move oversupply even while posting losses.

Taiwan-based research firm EnergyTrend says market optimism in China has driven up solar module prices, while production of modules, cells, and wafers has increased month on month.

China is transitioning to a market-driven framework for solar energy pricing, with the change set to take effect by June 1, 2025. The National Energy Administration (NEA) has announced ...

Cheap as they are, the company's solar cells are not handed out as freebies. But China's policy of driving up both demand for renewable technologies and the production capacity needed to...

According to an analysis by Wood Mackenzie, China, which accounts for the 80% of the world's solar module production capacity, has fueled an oversupply that has crashed global prices ...

Solar energy is the most common, cheapest, and most mature renewable energy technology. With solar photovoltaics taking over recently, an in-depth look into their supply chain ...

Oversupply pushed prices of finished solar panels in China down 42% in 2023, making Chinese panels more than 60% cheaper than U.S.-made equipment, with some module-only ...

The analysis reveals that three converging factors - polysilicon consolidation, supply-side production cuts, and the cancellation of China's 13% VAT export rebate - will drive solar module ...
