Can you install solar panels on a flat roof?

Yes-- you can install solar panels on a flat roof, and in many cases, it gives you more flexibility than a traditional pitched roof. Since flat roofs don't have a built-in slope, your installer will use special mounting equipment to tilt the panels for better sunlight exposure and to reduce debris buildup (known as soiling).

Should solar panels be installed flat or sloped?

In fact, flat roof installations often outperform sloped roof systems when properly designed and installed. The key is understanding that panels should never be installed completely flat against the roof surface. Solar panels require a minimum tilt angle of 10 degrees to function optimally and maintain manufacturer warranties.

Are flat roof solar panels worth it?

A flat roof solar panel installation is entirely feasible and worth it. You'll just need more racking equipment to ensure your panels face south and are at an optimal angle. In some ways, flat roof solar panel systems are actually more advantageous than traditional slanted roof systems.

Can solar panels be laid flat?

Solar panels shouldn't be laid flat. To maximize their time in the sun, solar panels should ideally face south and tilt between 15 and 40 degrees. Most sloped roofs are in this angle range, which makes for an easy installation. But that doesn't mean that flat roofs aren't fit for solar, too.
