

# Solar power generation and water pumping in barren mountains

JILU solar water pump system can utilize solar energy and groundwater resources according to local conditions, and is equipped with drip irrigation and intelligent control system.

Seeing the potential for low-cost irrigation to help mountain communities, Pakistan's government last year approved funding for the Gilgit-Baltistan water management department to ...

Much like giant batteries, these plants store energy by pumping water from a lower reservoir to an upper reservoir and releasing it through turbines when needed.

The study introduces a novel closed-loop Discrete Regenerative Fuel Cell (DRFC) solar-hydrogen storage irrigation system designed explicitly for nocturnal utilization in water-scarce regions ...

People living in the Gojal Valley, a remote region of Pakistan, no longer need to wait for the rain to fall to replenish their water stores. New, hydro powered pumps now provide them with a ...

In Chile, Colombia, Peru and the Plurinational State of Bolivia, at least 95 percent of hydropower is generated in mountain regions. Solar power can also be efficiently produced in mountains and other ...

The containerized mobile foldable solar panel is an innovative solar power generation device that combines the portability of containers with the renewable energy ...

Located in Kern County, California, the Barren Ridge solar project, also known as the RE Cinco project, produces enough clean electricity to power more than 25,000 homes.

Discover how amazing solar-powered systems help provide clean water for irrigation, drinking and farming - and reduce manual labour.
