

Solar power generation declines

In the third quarter of 2025, solar projects representing about 20% of planned capacity reported a delay, a decrease from 25% in the same period in 2024, based on data compiled from ...

The world is set to add 649 gigawatts of solar power capacity in 2026, down slightly from 2025, with the decline driven by policy shifts in China and the US that have cooled demand growth.

Solar photovoltaic costs have fallen by 90% in the last decade, onshore wind by 70%, and batteries by more than 90%. These technologies have followed a "learning curve" called Wright's ...

The average power prices earned by solar projects in 2024 dropped by more than 50% compared to 2023, which has reduced the economic viability of new projects. Additionally, state ...

Forecasts for solar deployment from 2025 to 2030 have been revised downward by 4 to 18 percent due to policy changes or regulatory risk. Concerns are growing about permitting reform ...

Declines in residential solar markets have been a hit to the industry--but its foundation is strong. We look at why the future is still bright for solar.

Despite growing demand for energy, the solar industry faces a rocky road over the next few years -- particularly if the Senate concurs with renewable energy tax credit cuts that have ...

The International Renewable Energy Agency (IRENA) reports that, between 2010 and 2023, the global weighted average levelized cost of energy of concentrating solar power (CSP) fell ...

In the third quarter of 2025, about 20% of planned US solar power capacity experienced delays--down from 25% a year earlier, signaling improving project timelines, according to the US ...

- Together, utility -scale solar and wind generation accounted for more power than coal generation. - Solar overtook hydropower to be the second -largest source of renewable energy ...
