

Is solar energy a good option for crude oil heating?

A thermal storage system (TES) is included to handle the sun's intermittent nature. The system's energy and exergy efficiencies were determined to be 60.94 and 19.34%, respectively. In addition, a 10% solar contribution to crude oil heating reduces 11,950 tonnes of CO₂ annually.

How does solar energy affect crude oil heating?

A thermal storage system (TES) is included to handle the sun's intermittent nature. The system's energy and exergy efficiencies were determined to be 60.94 and 19.34%, respectively. In addition, a 10% solar contribution to crude oil heating reduces 11,950 tonnes of CO₂ annually.

Can solar energy enhance traditional heating systems?

Sustainable and environmentally beneficial heating methods, such as solar energy are needed to augment traditional heating systems. In the current work, the preliminary data is collected from the Heavy Crude Unit (HCU) in Attock Refinery Limited (ARL) Rawalpindi, Pakistan.

Can a PTC-based solar heating system be used in a refinery?

Using TRNSYS software, the proposed Parabolic Trough Collector (PTC)-based solar heating system paired with the boiler is modelled. Sensible thermal energy storage (TES) system is integrated into the refinery's process heating to handle the intermittent nature of solar energy. It was discovered * Corresponding author. ** Corresponding author.

Crude oil heating is considered an energy-intensive process in the oil industry that requires a huge amount of heat to process the crude oil. There is scarcity of a thorough research that ...

Conclusion Integrating a fired oil boiler with a solar heating system is a viable and beneficial solution for many applications. By combining the reliability of fired oil boilers with the sustainability of solar ...

The author has converted an old oil-filled radiator heater into a dump load for their hydro/solar system, dumping excess power as heat into their A=Frame greenhouse. They use the ...

We offer efficient and reliable thermal fluid systems for the production of electricity in Concentrated Solar Power plants with thermal oil heaters.

The purpose of this study is to investigate the potential use of solar energy within an oil refinery to reduce its fossil fuel consumption and greenhouse gas emissions. A validated ASPEN ...

The integrated technologies are: concentrated solar tower, radiative heat tube, steam power cycle, hybrid solar and oil-fired steam generator, and alkaline electrolysis. The system is ...

Abstract: In the process of crude oil gathering and transportation, the use of gas or electric energy at the wellhead for its heating and viscosity reduction is prone to cause a large amount of ...

Solar power generation with oil heater

This heat - also known as thermal energy - can be used to spin a turbine or power an engine to generate electricity. It can also be used in a variety of industrial applications, like water desalination, enhanced ...

The solar heating system for crude oil utilizes traditional oil heaters for preheating, coupled with renewable solar energy, to implement a low-carbon heating method.
