What are the challenges in the application of energy storage technology?

There are still many challenges in the application of energy storage technology, which have been mentioned above. In this part, the challenges are classified into four main points. First, battery energy storage system as a complete electrical equipment product is not mature and not standardised yet.

Why is non-acceptance of energy storage systems a problem?

Non-acceptance of EES systems by the industry can be a significant obstacle to the development and prevalence of the utilization of these systems. To generate investment in energy storage systems, extensive cooperation between facility and technology owners, utilities, investors, project developers, and insurers is required.

How to reduce the safety risk of electrochemical energy storage?

The safety risk of electrochemical energy storage needs to be reduced through such as battery safety detection technology, system efficient thermal management technology, safety warning technology, safety protection technology, fire extinguishing technology and power station safety management technology.

Why is energy storage a problem?

The lack of direct support for energy storage from governments, the non-announcement of confirmed needs for storage through official government sources, and the existence of incomplete and unclear processes in licensing also hurt attracting investors in the field of storage (Ugarte et al.).
