

# When will the Angola hybrid energy storage project be completed

The first of 46 solar minigrids planned in Angola has been inaugurated by the African country's Minister of Energy and Water.

The projects will be installed in the Moxico, Lunda Norte, Lunda Sul, Bie, and Malanje provinces, adding 296 MW of solar capacity and 719 MWh of battery energy storage system to the Angolan grid.

Inaugurated in December 2025, this groundbreaking project features a 25.4 megawatt-peak (MWp) solar PV system paired with a 75.26 megawatt-hour (MWh) battery storage solution, providing round-the ...

With the ongoing solar projects under development in Angola with an installed capacity amounting to 500 MW, it is urgent to start thinking about efficient energy storage solutions.

Under the Angola 2025 Plan, the 46 planned mini-grids are expected to deliver a total of approximately 256 MWp of solar capacity once the programme is completed around 2026.

The project is set to benefit more than 136,000 people living in the Angolan municipality of Cazombo, the capital of the Moxico Leste province in the east of the country.

The scheme, part of a Ministry of Energy and Water programme spanning 49 locations in five provinces, is expected to be completed by July 2027 and represents an investment of EUR870 million.

The new loan will cover the cost of 48 hybrid photovoltaic generation and energy storage systems that will serve more than 200,000 households in 60 communities across the country.

Construction works on the project started last year. Completion is anticipated in 2026. Portuguese diversified group MCA Group has contracted 319 MWh of lithium-ion batteries from ...

Recent advancements in energy storage projects highlight the country's commitment to bridging energy gaps and supporting renewable integration. This article explores the latest updates, challenges, and ...
